GLOBAL MARKETS & ECONOMIES | WEEKLY ECONOMIC INDICATORS | ASIAN STOCK INDICATORS |  
CURRENCIES | PRECIOUS METAL | O I L |

## **GLOBAL MARKETS**

- Wall Street pulled back on Tuesday as a technology stock rebound lost steam and enthusiasm from a tax-cut proposal waned, while copper prices fell steeply to their lowest point in two months.

## **GLOBAL ECONOMIES**

- Australian retail sales bounced in October after months of lukewarm demand, a bright sign for spending in the upcoming holiday season as Amazon.com Inc opened its doors for business.
- Reserve Bank of New Zealand (RBNZ) governor Grant Spencer on Tuesday said the bank has adopted a flexible approach to inflation targeting as it grappled with low global price growth, sparking a rally in the local currency.
- Growth in China's services sector activity picked up to a three-month high in November, buoyed by a solid rise in new business, though the rate of expansion remained moderate and weaker than the long-run trend, a private survey showed on Tuesday.
- Business activity across the euro zone looks set to end 2017 on a high note after a busy November, according to a survey giving the latest evidence the bloc's economy was a star performer this year.
- Greek banks made further progress during the fourth quarter in reducing their exposure to doubtful and non-performing loans, central bank data showed on Tuesday.
- Britain's economy is ending 2017 lagging the euro zone's strong recovery as the effects of last year's Brexit vote weigh on shoppers and on businesses, according to a range of data released on Tuesday.
- The U.S. trade deficit increased more than expected in October, hitting a nine-month high as rising oil prices helped to boost the import bill, suggesting that trade could be a drag on growth in the fourth quarter.

**GLOBAL MARKETS & ECONOMIES**
**GLOBAL MARKETS**

**U.S. & Global Markets** – Wall Street pulled back on Tuesday as a technology stock rebound lost steam and enthusiasm from a tax-cut proposal waned, while copper prices fell steeply to their lowest point in two months.

The U.S. Treasury yield curve flattened, with the difference between the yields on five- and 30-year debt hitting its lowest in a decade.

A flatter yield curve is often a sign of worries about the economy, while market watchers also pointed to the drop in copper, which is an indicator of global demand, as another potential broader concern.

Wall Street's main indexes closed lower. Investors have been switching their bets among sectors in recent days capitalizing on a U.S. tax-cut package moving swiftly through Congress.

"We are still trying to sort out the winners and losers under tax legislation," said Peter Tuz, president of Chase Investment Counsel in Charlottesville, Virginia.

Meanwhile, Tuz said, investors may be selling their stock winners from this year's record-setting rally "to lock some of that in or diversify some of it away into things that had not done as well."

The Dow Jones Industrial Average fell 109.41 points, or 0.45 percent, to 24,180.64, the S&P 500 lost 9.87 points, or 0.37 percent, to 2,629.57 and the Nasdaq Composite dropped 13.15 points, or 0.19 percent, to 6,762.21.

The S&P technology sector, which has lost momentum in recent days, rose 0.2 percent and was the only major group to end in positive territory. But the sector finished well below its session highs.

Investors have been selling technology shares recently, bidding up prices for banks, telecoms and transports in a rotation into groups expected to particularly benefit from passage of U.S. bill designed to slash corporate taxes.

The Republican-controlled U.S. House of Representatives voted on Monday to go to conference on tax legislation with the Senate, moving Congress another step closer to a final bill.

In Europe, the pan-European FTSEurofirst 300 index lost 0.12 percent, after posting its biggest gain in more than a month on Monday.

Europe's STOXX 600 technology index rose 0.6 percent.

MSCI's gauge of stocks across the globe shed 0.31 percent.

Copper lost 4.31 percent to \$6,531.50 a tonne as inventories rose, its biggest single-session decline in more than two years. Other metals, such as nickel and zinc, also fell.

Copper prices were also pressured by recent strength in the dollar, with many commodities denominated in the U.S. currency.

"Today is copper traders questioning whether or not global growth is as strong as they were thinking," said William Delwiche, investment strategist at Baird in Milwaukee. "They are looking at the inability of bond yields to make a sustained move higher and causing them to question the strength in the economy."

The dollar rose for a second straight session as the currency continued to benefit from optimism surrounding U.S. tax reform.

The dollar index rose 0.12 percent, with the euro down 0.33 percent to \$1.1825.

Benchmark 10-year notes last rose 7/32 in price to yield 2.3545 percent, from 2.379 percent late on Monday. ([Source Reuters – @her1en](#))

**GLOBAL ECONOMIES**

**Australia** – Australian retail sales bounced in October after months of lukewarm demand, a bright sign for spending in the upcoming holiday season as Amazon.com Inc opened its doors for business.

The better-than-expected sales came as the Reserve Bank of Australia (RBA) held rates steady at 1.50 percent for the fifteenth straight meeting as inflation remained sluggish.

"The low level of interest rates is continuing to support the Australian economy," Governor Philip Lowe said in the monthly policy statement.

Policy makers got some encouraging signs with Tuesday's data from the Australian Bureau of Statistics (ABS) showing retail sales rose 0.5 percent in October to around A\$26 billion (\$19.9 billion), from September's upwardly revised 0.1 percent gain.

That was the strongest lift since May and above expectations for a 0.3 percent increase. Sales were up across every sector with clothing and eating out particularly strong.

Australia's brick-and-mortar retailers have been struggling amid cutthroat competition and as relentless price discounts fail to entice customers facing paltry wage growth and mountains of debt.

There are fears Amazon's entry could further stifle traditional retailers and suppress prices and inflation.

The retail behemoth started taking online orders on Tuesday, ending breathless speculation about its arrival in the world's twelfth biggest economy.

Oddly, the ABS does not yet include online data in its headline retail series even though they account for more than 7 percent of total sales.

That means Amazon will not feature in the monthly figures, though internet sales are easily the fastest growing segment of the market.

The ABS does have an experimental estimate of online retail turnover and that jumped 11.3 percent in October to almost match last year's Christmas sales in dollar terms.

"Overall, the result suggests some of the headwinds impacting retail eased in October," Westpac economist Matthew Hassan said.

"The near term outlook still looks far from positive though with weak wages growth and a slowing housing market...to impact demand, and new entrants, most notably Amazon, set to intensify price competition."

**New Zealand** – Reserve Bank of New Zealand (RBNZ) governor Grant Spencer on Tuesday said the bank has adopted a flexible approach to inflation targeting as it grappled with low global price growth, sparking a rally in the local currency.

Spencer said in a speech that monetary policy had less leverage over inflation than in the past because of persistent low prices for imports, one reason it had resisted pressure for more cuts in interest rates.

"The changes in domestic pricing behavior are causing our flexible inflation targeting approach to become more flexible," Spencer said in the speech to the Institute of Directors and published on the bank's website.

"In pursuing our long term price stability objective, relatively more weight is being attached to output, employment and financial stability," he added.

The kiwi jumped to \$0.6902 in the wake of the speech, from around \$0.6866.

"What he's saying right now is they're conscious that there's this lingering softness in the imported side of the inflation picture but they're not in any rush to cut rates which...gave the dollar a boost," said Satish Ranchhod, senior economist at Westpac Bank.

Nevertheless, Spencer cautioned the RBNZ might ultimately have to cut rates again should non-tradable inflation fail to accelerate in late 2018, as forecast in its November monetary policy statement.

"If this response does not eventuate then we would have to consider a further easing of policy to generate additional domestic demand

pressure, particularly if global inflation remains low in line with our forecasts," he said.

New Zealand's central bank has held rates at 1.75 percent for seven consecutive meetings and projected rates would stay flat until mid-2019 to counter low global inflation and a slowing economy.

Spencer also highlighted that the RBNZ was already paying attention to factors such as employment, a shift desired by the country's new Labour-led government.

The government launched a review of the RBNZ in November to expand its mandate away from just inflation targeting. It plans to introduce a bill to Parliament in early 2018 to put the changes into action.

**China** – Growth in China's services sector activity picked up to a three-month high in November, buoyed by a solid rise in new business, though the rate of expansion remained moderate and weaker than the long-run trend, a private survey showed on Tuesday.

The upbeat findings broadly echo those of an official gauge of the non-manufacturing sector last week that showed activity accelerated at a faster rate in November, reinforcing the view that an expected slowdown in the broader economy would be gradual.

The Caixin/Markit services purchasing managers' index (PMI) rose to 51.9 in November, up from 51.2 in October and the highest reading since August.

A reading above 50 indicates growth, and any lower signals contraction on a monthly basis.

The index had plunged to 21-month low in September after hitting a three-month high in August.

New business also grew at the fastest pace in three months, with survey respondents reporting sales were supported by the addition of new clients and promotional activities. Companies slightly picked up the pace of new hiring as a result.

China's leaders are counting on growth in services and consumption to rebalance their economic growth model from its heavy reliance on investment and exports.

The services sector accounts for over half of the economy, with rising wages giving Chinese consumers more spending power that is being felt at home and abroad.

Sales during China's annual 24-hour shopping binge on Nov. 11, known as Singles' Day, exceeded combined sales for Black Friday and Cyber Monday in the United States.

Alibaba, the Chinese e-commerce giant, reported its Singles' Day sales hit \$25.4 billion, smashing its own record from last year and cementing it as the world's biggest shopping event.

Unlike the official data, the Caixin survey tends to focus more on small and mid-sized companies, which have tended to be under greater strain than their larger, state-supported peers.

The Caixin survey showed service providers in China were able to pass through higher input costs to clients, as companies raised their output charges at the quickest pace since July 2015.

A number of surveyed firms indicated that greater prices paid for raw materials, fuel and salaries had driven the latest upturn in overall costs.

A survey of manufacturers last week also suggested input costs remained high, fueled by China's government's tougher pollution measures in a battle against thick winter smog.

Mainly driven by the strong reading in the service sector, the headline Caixin China Composite PMI - which includes both manufacturing and services -- rose to 51.6 in November, compared with 51.0 in October.

"The Caixin PMI readings in November showed the economy has maintained stability and there was no imminent risk of a significant decline in its growth rate. But we should be cautious because the economy may come under rising inflationary pressure at the start of next

year due to continued price increases," Zhengsheng Zhong, director of macroeconomic analysis at CEBM Group, said in a note with the report.

The world's second-biggest economy has defied market expectations with growth of 6.9 percent in the first nine months of the year, supported by a construction boom and robust exports.

But China's booming industrial sector is starting to show some signs of fatigue as higher borrowing costs, a crackdown on air pollution and a cooling housing market weigh on activity.

**Euro Zone** – Business activity across the euro zone looks set to end 2017 on a high note after a busy November, according to a survey giving the latest evidence the bloc's economy was a star performer this year.

Growth accelerated last month as firms struggled to meet booming demand -- in stark contrast to Britain, where the dominant services sector lost some momentum as firms worry about what leaving the European Union will mean for them.

"It confirms that the euro zone economy remains in rude health and the final quarter of the year is going to be very strong. We see a lot of momentum," said Angel Talavera at Oxford Economics.

Forward-looking indicators in the survey suggest the momentum will be maintained this month.

IHS Markit's final composite Purchasing Managers' Index for the euro zone, seen as a good guide to growth, was confirmed at an earlier flash reading of 57.5, up from October's 56.0.

The PMI scaled its highest level since April 2011 and was comfortably above the 50 mark that separates growth from contraction.

In less upbeat data, euro zone retail sales fell more than expected in October, official data showed on Tuesday.

"Warm weather weighed on clothing sales and therefore overall retail sales in October, but November's rise in consumer confidence to a 16-year high suggests that sales growth rebounded last month," said Stephen Brown at Capital Economics.

Growth in Germany's services sector slowed a little last month, PMIs showed, but remained solid, while booming growth in France led firms to step up hiring to the fastest pace in 16 years.

Italy's services sector growth accelerated after slowing for three months, boosting prospects for continued expansion in the euro zone's third-largest economy, although Spain's grew at a slightly slower pace than a month earlier.

"There is a synchronised upturn in the euro zone -- it is not just a German story or core versus periphery," Talavera said.

But Britain's IHS Markit/CIPS services PMI, spanning businesses from hotels to hairdressers, slumped to 53.8 in November from October's 55.6.

"Political uncertainty and the consumer slowdown will continue to keep a lid on growth next year, even if there are some positive Brexit steps over coming weeks," said James Smith at ING.

Hopes for a deal on the so-called Brexit divorce deal with the European Union was thwarted by Northern Ireland's Democratic Unionist Party (DUP) over border concerns on Monday.

**Greece** – Greek banks made further progress during the fourth quarter in reducing their exposure to doubtful and non-performing loans, central bank data showed on Tuesday.

At the end of December, so-called non-performing exposures (NPEs) - the biggest challenge facing the sector - had fallen by one billion euros to 104.8 billion euros, or 50 percent of banks' overall loan book, the data showed.

This compares with a target of 50.5 percent, or 105.8 billion euros.

NPEs comprise non-performing loans (NPLs) - past credit due for more than 90 days - and restructured loans likely to turn sour. Cutting them would free up more capital to fund productive sectors of the economy, which is slowly recovering.

Greek lenders had NPEs totalling 14.5 billion euros (\$16.32 billion), or 5.5 percent of loans, when the global financial crisis began in 2008.

While NPEs soared to 106.9 billion, or 50.5 percent of loans, at the end of June last year, banks have agreed with European Central Bank regulators to shrink them by 38 percent to 66.7 billion by end-2019, meaning the NPE ratio will fall to 33.9 percent of their loan books.

The agreed targets are back-loaded, meaning most of the reduction will take place next year and in 2019, based on the plan.

Despite the reduction in the fourth quarter, NPEs encompassing mortgages, corporate and consumer loan portfolios remain high across the board, the Bank of Greece said.

While default rates have slowed, it said, they remain higher than the pace of restoring loans back to performing status (cure rate), particularly in the business loan segment.

The main driver behind the NPE reduction has been write-offs, while liquidations, collections and loan sales contributed to a lesser extent, the central bank said.

Tuesday's data showed banks also beat the reduction target on NPLs, with the ratio coming in at 36.2 percent, or 75.9 billion euros, at the end of December versus a targeted 36.4 percent.

Greece's four major banks - Piraeus, National, Eurobank and Alpha - and three less systemic banks submit data on nine operational targets.

**UK** – Britain's economy is ending 2017 lagging the euro zone's strong recovery as the effects of last year's Brexit vote weigh on shoppers and on businesses, according to a range of data released on Tuesday.

The dominant services sector lost some momentum in November while prices charged by companies rose at their fastest pace in nearly 10 years, potentially adding to the country's inflation problem, a closely watched survey showed.

Another report showed shoppers spent more of their budgets on the rising cost of food, while car sales fell for the eighth month in a row in November.

Britain's economy withstood the initial shock of the Brexit vote in 2016 but has slowed sharply this year as the pound's plunge following the referendum pushed up inflation and hit households at a time when wages are growing only sluggishly.

Companies have meanwhile slowed investment as they wait to see what leaving the European Union means for them, potentially adding to Britain's weak productivity growth -- another drag on the economy.

Prime Minister Theresa May failed to clinch a deal on Monday to open talks on post-Brexit free trade with the European Union after a tentative deal with Dublin to keep EU rules in Northern Ireland angered her political allies in Belfast.

The monthly IHS Markit/CIPS services Purchasing Managers' Index (PMI), covering businesses from hotels to hairdressers, fell to 53.8 in November from to 55.6 in October, at the low end of most forecasts from economists polled by Reuters.

Taken along with a pickup for the smaller manufacturing and construction sectors, November's PMIs suggested the economy was likely to see robust quarterly growth of about 0.45 percent in late 2017, IHS Markit said -- faster than earlier in the year.

But businesses were downbeat about the prospects for the economy and the composite PMI of British services plus manufacturing fell to 54.9, a long way short of the euro zone's 57.5, its highest since April 2011.

"The euro zone is going great guns at the moment and it will almost certainly outpace the UK this year and next," Investec economist Philip Shaw said.

Chris Williamson, an economist with IHS Markit, said the big news in the services survey was the jump in prices charged by companies. They hit their highest level since February 2008, and the second-highest since the survey began in 1996.

That is likely to be a worrying sign for the Bank of England which has said inflation has probably already peaked and has signalled only a gradual rise in interest rates after it raised borrowing costs for the first time in a decade last month.

"Rising oil prices were again to blame in November, with firms also reporting the need to pass higher costs of a wide variety of other inputs on to customers as a result of the weak pound having driven up import prices," Williamson said.

"As such, the survey data suggest that inflationary pressures have yet to peak."

**U.S.** – The U.S. trade deficit increased more than expected in October, hitting a nine-month high as rising oil prices helped to boost the import bill, suggesting that trade could be a drag on growth in the fourth quarter. The Commerce Department said on Tuesday the trade gap widened 8.6 percent to \$48.7 billion. That was the highest level since January and followed an upwardly revised \$44.9 billion shortfall in September.

Economists polled by Reuters had forecast the trade deficit widening to \$47.5 billion in October after a previously reported \$43.5 billion deficit the prior month.

When adjusted for inflation, the trade deficit increased to \$65.3 billion, also the largest since January, from \$62.2 billion in September. The so-called real trade deficit in October was above the third-quarter average of \$62.0 billion.

That suggests trade could subtract from gross domestic product in the October-December quarter, if the deficit does not shrink in the last two months of the year. U.S. financial markets were little moved by the wider trade gap, which was flagged in an advance report last month.

The chronic trade deficit has garnered the attention of Republican President Donald Trump, who has blamed it for the massive loss of U.S. manufacturing jobs as well as moderate economic growth.

Trump argues the United States has been disadvantaged in its dealings with trade partners and has ordered the renegotiation of the North American Free Trade Agreement (NAFTA), which was signed in 1994 by the United States, Canada and Mexico.

NAFTA talks have stalled, with Mexico and Canada rejecting a U.S. proposal to raise the minimum threshold for autos to 85 percent North American content from 62.5 percent as well as to require half of vehicle content to be from the United States.

The government reported last month that trade contributed 0.43 percentage point to the economy's 3.3 percent annualized growth pace in the third quarter. The Trump administration believes a smaller trade deficit, together with deeper tax cuts could boost annual GDP growth to 3 percent on a sustained basis. [\(Source Reuters, Research – @her1en\)](#)

## ASIAN STOCK INDICATORS – Daily Outlook

**Japan's Nikkei** share average dropped on Tuesday with semiconductor equipment manufacturers' stocks hit by weakness in U.S. tech shares overnight, undercutting gains for banks and brokerages. The Nikkei ended 0.4 percent lower at 22,622.38, but the broader Topix added 0.2 percent to 1,790.97. Manufacturers of chip-manufacturing equipment lost ground, with Tokyo Electron sliding 2.8 percent and Advantest Corp shedding 1.8 percent. Silicon wafer maker Sumco Corp tumbled 4.1 percent. Banks and brokers, like their U.S. counterparts overnight, gained. Sumitomo Mitsui Financial Group advanced 1.0 percent and Nomura Holdings climbed 1.6 percent.

**South Korea's KOSPI** stock index closed up on Tuesday, recovering from earlier losses in the session. The Korean won rose while bond yields were muted. At 06:30 GMT, the KOSPI was up 8.45 points or 0.34 percent at 2,510.12. The won was quoted at 1,085.8 per dollar on the onshore settlement platform, 0.27 percent firmer than its previous close at 1,088.7. In offshore trading, the won was quoted at 1,084.31 per U.S. dollar, up 0.09 percent from the previous day, while in one-year non-deliverable forwards it was being transacted at 1,080.88 per dollar. MSCI's broadest index of Asia-Pacific shares outside Japan was down 0.15 percent, after U.S. stocks ended the previous session with mild losses. Japanese stocks weakened 0.37 percent. The KOSPI is up around 23.5 percent so far this year, and down by 0.47 percent in the previous 30 days. The current price-to-earnings ratio is 12.10, the dividend yield is 1.28 percent and the market capitalisation is 1,242.04 trillion won. The trading volume during the session on the KOSPI index was 387,710,000 shares, and of the total traded issues of 871, the number of advancing shares was 520. Foreigners were net buyers of 54,172 million won worth of shares. The U.S. dollar has fallen 10.11 percent against the won this year. The won's high for the year is 1,075.71 per dollar on November 29 2017 and low is 1,211.8 on January 3, 2017. In money and debt markets, December futures on three-year treasury bonds fell 0.07 points to 108.2. The benchmark 3-year Korean treasury bond yielded 2.091 percent, slightly higher than the previous day's 2.08 percent.

**Hong Kong** stocks fell on Tuesday as index heavyweight Tencent Holdings slumped to one-month low. At close of trade, the Hang Seng index was down 295.48 points or 1.01 percent at 28,842.80. The Hang Seng China Enterprises index fell 0.29 percent to 11,484.69. The sub-index of the Hang Seng tracking energy shares rose 0.3 percent while the IT sector tumbled 3.03 percent, the financial sector was 0.9 percent lower and property sector dipped 0.67 percent. The top gainer on Hang Seng was Wharf Holdings Ltd up 2.32 percent, while the biggest loser was Sunny Optical Technology Group Co Ltd which was down 5.61 percent. China's main Shanghai Composite index closed down 0.2 percent at 3,303.0417 points while its blue-chip CSI300 index ended up 0.52 percent. Around the region, MSCI's Asia ex-Japan stock index was weaker by 0.36 percent while Japan's Nikkei index closed down 0.37 percent.

The yuan was quoted at 6.6123 per U.S. dollar at 08:11 GMT, 0.06 percent firmer than the previous close of 6.6166. So far this year, the Hang Seng index is up 32.44 percent, while China's H-share index is up 22.6 percent. The Hang Seng has declined 0.13 percent this month. The top gainers among H-shares were China Communications Construction Co Ltd up 1.85 percent, followed by New China Life Insurance Co Ltd gaining 1.55 percent and China Shenhua Energy Co Ltd up by 1.34 percent. The three biggest H-shares percentage decliners were Guangzhou Automobile Group Co Ltd which was down 2.91 percent, People's Insurance Group of China Co Ltd off 2.5 percent

and China Vanke Co Ltd down 1.4 percent. About 1.48 billion Hang Seng index shares were traded, roughly 75.8 percent of the market's 30-day moving average of 1.96 billion shares a day. The volume traded in the previous trading session was 1.67 billion. At close, China's A-shares were trading at a premium of 33.38 percent over the Hong Kong-listed H-shares. The price-to-earnings ratio of the Hang Seng index was 13.29 as of the last full trading day while the dividend yield was 3 percent. So far this week, the market capitalisation of the Hang Seng index has risen by 1.93 percent to HK\$19.05 trillion. The short and one-factor leveraged Hang Seng index, which is designed to replicate the payoff of a short or leveraged portfolio and is linked to the movements of the Hang Seng Index, was higher by 1.01 percent on the day at 5,124.83 points.

**China** stocks ended mixed on Tuesday, after a private survey showed growth in China's services sector activity picked up to a three-month high in November. At the close, the Shanghai Composite index was down -6.58 points or 0.2 percent at 3,303.04. The blue-chip CSI300 index was up 0.52 percent, with its financial sector sub-index higher by 1.61 percent, the consumer staples sector up 0.15 percent, the real estate index up 0.3 percent and healthcare sub-index up 0.15 percent. The smaller Shenzhen index ended down 1.89 percent and the start-up board ChiNext Composite index was weaker by 2.18 percent. Around the region, MSCI's Asia ex-Japan stock index was weaker by 0.14 percent while Japan's Nikkei index closed down 0.37 percent. At 07:01 GMT, the yuan was quoted at 6.614 per U.S. dollar, 0.04 percent firmer than the previous close of 6.6166. The largest percentage gainers in the main Shanghai Composite index were Kunwu Jiuding Investment Holdings Co Ltd up 9.99 percent, followed by Yangmei Chemical Co Ltd gaining 6.35 percent and NINGBO BIRD Co Ltd up by 5.4 percent. The largest percentage losses in the Shanghai index were Lawton Development Co Ltd down 10 percent, followed by Sichuan Langsha Holding Ltd losing 9.99 percent and Hunan Copote Science Technology Co Ltd down by 9.98 percent. So far this year, the Shanghai stock index is up 6.64 percent, while China's H-share index listed in Hong Kong is up 22.6 percent. Shanghai stocks have declined 0.23 percent this month. About 20.83 billion shares were traded on the Shanghai exchange, roughly 119.0 percent of the market's 30-day moving average of 17.50 billion shares a day. The volume in the previous trading session was 14.81 billion. As of 07:02 GMT, China's A-shares were trading at a premium of 32.30 percent over the Hong Kong-listed H-shares. The Shanghai stock index is below its 50-day moving average and above its 200-day moving average. The price-to-earnings ratio of the Shanghai index was 14.83 as of the last full trading day while the dividend yield was 2 percent. So far this week, the market capitalisation of the Shanghai stock index has risen by 0.10 percent to 28.82 trillion yuan. [\(Source Reuters, Research: rizal\)](#)

CURRENCIES – *Daily Outlook***Dollar advances for second day on U.S. tax reform optimism - Reuters News**

The dollar rose for a second straight session on Tuesday, a day after posting its biggest daily rise in a week, as the currency continued to benefit from optimism surrounding U.S. tax reform.

"The dollar will stay well-supported until we get some clarification on the tax bill and then we will probably trade off a little bit," said Shaun Osborne, chief FX strategist at Scotiabank in Toronto.

On Monday, the Republican-controlled House of Representatives voted to go to conference with the Senate on tax legislation, setting up formal

negotiations on the bill that could take weeks to complete.

The Republican-led Senate is expected to hold a similar conference vote later this week.

In late trading, the dollar index, a gauge of the greenback's value against six major currencies, was up 0.2 percent at 93.329.

Against the yen, the dollar gained 0.2 percent to 112.63 yen. The euro, meanwhile, was down 0.4 percent versus the dollar at \$1.1822.

Though the dollar has recovered some after falling to a two-month low last week, some market strategists expect further dollar gains next year to be limited.

"Our base case here is that a lot of the good news here is priced into the U.S. dollar," said Scotia's Osborne. "There's not much more upside to the dollar at this point."

ING believes the euro will likely be the beneficiary of any weakness in the dollar.

In a 2018 outlook report on Tuesday, ING strategists said they expect the euro to rise to \$1.30 against the dollar next year, a level not seen since September 2014.

"The euro is in the sweet spot of this global recovery and looks well-positioned for the investment cycle," said Petr Krpata, chief EMEA FX strategist at ING in London.

Sterling trimmed early losses to trade down 0.2 percent at \$1.3435 as broad disappointment over the lack of a Brexit deal prompted some investors to cut their long bets.

Prime Minister Theresa May failed to clinch a deal on Monday to open talks on post-Brexit free trade with the European Union after a tentative deal with Dublin to keep EU rules in Northern Ireland angered her allies in Belfast.

"I don't think this is a market that is too long sterling, but there definitely has been an increase in the excitement level of late with sterling/dollar staying very close to a nice uptrend over the last several months," said W. Brad Bechtel, managing director at Jefferies LLC in New York.

## Precious Metal – Daily Outlook

### Gold at two-month low as dollar bounces on U.S. tax plan support - Reuters News

Gold dropped 1 percent to a two-month low on Tuesday as the dollar rose against a basket of currencies and U.S. stocks rebounded as investors assessed details of the U.S. tax overhaul legislation.

The U.S. dollar gained for a second consecutive session and U.S. technology stocks bounced, both benefiting from optimism surrounding the U.S. tax plan. The House of Representatives on Monday voted to go to conference with the Senate on their differing versions of the tax legislation, setting up formal negotiations on the bill.

Spot gold was down 1 percent at \$1,263.02 an ounce by 1:49 p.m. EST (1849 GMT), after dropping to a two-

month low of \$1,260.71.

U.S. gold futures for February delivery settled down \$12.80, or 1 percent, at \$1,264.90 per ounce.

"With this move today, that opens the door to more liquidation until you get more geopolitical risk and uncertainty in the world," said Josh Graves, senior commodities strategist at RJO Futures in Chicago.

Psychological support could come in at around \$1,250 an ounce, Graves added.

Gold has held broadly between \$1,271 and \$1,289 so far this month, after posting its narrowest monthly range in 12 years in November, but broke lower Tuesday. Bullion has risen 10 percent in the year to date, but momentum stalled in the second half as global equities rallied and an expected hike in U.S. interest rates approached.

"Overall physical demand is down to multi-year lows, so even outside the investment community, there is no real push into gold from the likes of China and India," said Carsten Menke, analyst at Julius Baer.

"Without this demand spark, gold just remains very, very sensitive to the U.S. dollar."

A stronger dollar makes assets priced in the U.S. currency more expensive for holders of other currencies.

Investors also are looking towards the U.S. non-farm payrolls report this week, the last employment figures before the U.S. Federal Reserve's monetary policy meeting next week.

The Fed is almost certain to raise interest rates later this month, according to a Reuters poll of economists.

Gold is highly sensitive to rising U.S. interest rates, which lift the opportunity cost of holding non-yielding bullion.

Among other precious metals, silver was down 1.7 percent at \$16.04 an ounce, earlier sliding to a 4-1/2-month low of \$16.

Platinum dipped 1 percent at \$914 an ounce, after matching its Oct. 30 low of \$909.50. Palladium dropped 0.8 percent at \$984.60 an ounce, after touching a 2-1/2-month low of \$979.60.

Monday's palladium price slide came with a 12,700-ounce reduction in exchange-traded fund holdings, Commerzbank said in a note. "This was already the fourth major daily outflow in the space of two weeks," it said. [\(Source Reuters, Research – @her1en\)](#)

## OIL – Daily Outlook

### Oil rises in anticipation of another U.S. crude drawdown - Reuters News

Oil edged higher on Tuesday, supported by strong demand, expectations of a drop in U.S. crude inventories and an OPEC-led deal to extend oil output cuts.

Brent crude settled up 41 cents, or 0.7 percent, at \$62.86 a barrel while U.S. West Texas Intermediate crude ended 15 cents, or 0.3 percent, higher at \$57.62 a barrel.

"Demand remains firm which is the main reason for us to still see oil at above \$60 per barrel," said Georgi Slavov, head of research at Marex Spectron.

Faster-than-expected growth in demand this year has given tailwind to OPEC's efforts to clear the glut and the latest U.S. inventory reports are likely to show a third straight weekly drop in crude stocks. Analysts expect data from industry group American Petroleum Institute (API) and the government's Energy Information Administration (EIA) to show crude stocks fell 3.4 million barrels last week. The API report is out at 4:30 p.m. EST (2130 GMT), followed by government data on Wednesday at 10:30 a.m. EST.

"We've got upcoming inventory reports today and tomorrow which could assist in giving the market more information to work off," said Tony Headrick, energy market analyst at CHS Hedging LLC.

Analysts looking to next year believe some tightening in supply will continue. Morgan Stanley analysts said in a note on Monday they expect demand to outpace supply in 2018, with most of the supply growth coming from the United States and Canada.

Goldman Sachs late Monday raised its forecast for 2018 Brent and WTI to \$62 and \$57.50 a barrel, respectively, thanks to OPEC's resolve in maintaining production cuts.

The Organization of the Petroleum Exporting Countries, Russia and other non-OPEC producers last week extended the deal to cut output by 1.8 million barrels per day (bpd) until the end of 2018 to get rid of excess oil in storage.

OPEC has shown strong compliance with the supply cut pledge and in November output fell by 300,000 bpd to its lowest since May, according to a Reuters survey.

"Yesterday was defined by profit taking in post-OPEC trade," he said, adding that the market is now watching for further signals on what 2018 will look like.

The OPEC-led producer group's Nov. 30 decision to extend their supply-cutting deal could bolster U.S. shale drilling given overall higher prices.

Data last week showed U.S. crude output rose to nearly 9.5 million bpd in September, approaching the high of 9.63 million bpd seen in 2015.
