GLOBAL MARKETS & ECONOMIES | WEEKLY ECONOMIC INDICATORS | ASIAN STOCK INDICATORS |  
CURRENCIES | PRECIOUS METAL | OIL |

## **GLOBAL MARKETS**

- The S&P 500 and the Nasdaq Composite notched record closing highs on Tuesday, the first trading day of 2018, while European equities finished lower and the U.S. dollar fell to its weakest level in over three months against key currencies.

## **GLOBAL ECONOMIES**

- Home prices across Australia's major cities fell in December as the once red-hot Sydney market continued to cool in the face of tighter rules on investment lending, a relief to regulators but a potential drag on consumer spending power.
- Growth in China's manufacturing sector unexpectedly picked up to a four-month high in December as factories cranked up production to meet a surge in new orders, a private business survey showed on Tuesday.
- Euro zone manufacturers ended 2017 by ramping up activity at the fastest pace in more than two decades, a survey showed on Tuesday, and rising demand suggests they will start the new year on a high.
- Growth in British manufacturing cooled last month from four-year highs struck in November, but the sector remained a bright spot in Britain's economy heading into 2018, a survey showed on Tuesday.
- The pace of growth in the Canadian manufacturing sector picked up at the end of last year as companies boosted their operating capacity amid an increase in backlogs of work and new orders, data showed on Tuesday.

**GLOBAL MARKETS & ECONOMIES****GLOBAL MARKETS**

**U.S. & Global Markets** – The S&P 500 and the Nasdaq Composite notched record closing highs on Tuesday, the first trading day of 2018, while European equities finished lower and the U.S. dollar fell to its weakest level in over three months against key currencies.

MSCI's gauge of stocks across the globe gained 0.74 percent. In 2017 the index set scores of record highs and rose by one-fifth in value.

Major stock indexes closed 2017 with their best performance since 2013. In the U.S. market, the advance came amid strong economic growth and corporate earnings, low interest rates and hopes, now realized, of U.S. corporate tax cuts.

U.S. equity indexes closed higher on Tuesday, buoyed by gains in technology and consumer discretionary stocks.

The Dow Jones Industrial Average rose 104.79 points, or 0.42 percent, to 24,824.01, the S&P 500 gained 22.18 points, or 0.83 percent, to 2,695.79, and the Nasdaq Composite added 103.51 points, or 1.5 percent, to 7,006.90.

"We're off to the races once again," said Stephen Massocca, senior vice president at Wedbush Securities in San Francisco.

"I don't expect the kind of moves we saw last year," he said. "But as long as monetary policy stays the way it is ... my view is stocks are going to have a decent year. And fiscal policy has become stimulative as well given the tax bill."

In Europe, equities closed lower, weighed by a decline in autos stocks following weaker car registrations data. Trading was also cautious ahead of the launch of a major reform of European financial markets.

The pan-European STOXX 600 index fell 0.21 percent, and euro zone stocks shed 0.19 percent.

Shares rose in Asia. Shanghai blue chips climbed 1.41 percent and MSCI's 24-country emerging market stock index jumped to a multi-year high after the Caixin index of Chinese industry rose to a four-month high of 51.5 in December, confounding forecasts for a decline. The 50-mark divides expansion from contraction.

**FALLING DOLLAR**

The dollar index, which tracks the greenback against a basket of major currencies, fell 0.29 percent, hampered by expectations of a slower pace of interest rate increases by the Federal Reserve amid a tepid U.S. inflation picture.

The dollar hit a three-month low on Friday, bringing its losses for 2017 to 9.8 percent, its worst performance since 2003.

Other currencies gained. The euro rose 0.39 percent to \$1.2055 and hit a four-month high on Tuesday after data showed that euro zone manufacturers ramped up activity last month at the fastest pace in more than two decades.

The Japanese yen strengthened 0.32 percent at 112.29 per dollar, while sterling was last trading at \$1.3594, up 0.69 percent.

U.S. Treasury yields rose in line with European government yields. A European Central Bank official said the ECB's massive bond purchase program might not continue later this year.

Benchmark U.S. 10-year notes last fell 14/32 in price to yield 2.4597 percent, from 2.411 percent late on Friday.

The 30-year bond last fell 43/32 in price to yield 2.8073 percent, from 2.741 percent late on Friday.

**GLOBAL ECONOMIES**

**Australia** – Home prices across Australia's major cities fell in December as the once red-hot Sydney market continued to cool in the face of tighter

rules on investment lending, a relief to regulators but a potential drag on consumer spending power.

Property consultant CoreLogic said its index of home prices for the combined capital cities dipped 0.4 percent in December from November.

Annual growth in prices slowed to 4.3 percent, from 5.2 percent in November and 10.5 percent in the middle of 2017.

Prices in Sydney slipped 0.9 percent in December and pulled annual growth down to just 3.1 percent, a far cry from the peak of 17 percent seen early in the year. Sydney dwelling values are still up 71 percent on the cyclical low hit in February 2012.

Melbourne fared somewhat better, thanks in part to rapid population growth, with prices easing 0.2 percent in December to be 8.9 percent higher for the year.

Home prices outside the major cities edged up 0.2 percent in December to be 3.8 percent higher on the year.

A slowdown has been much desired by the country's bank watchdog which tightened standards on investment and interest-only loans, leading banks to raise rates on some mortgage products.

The Reserve Bank of Australia has also been concerned that debt-fueled speculation in property could ultimately hurt both consumers and banks.

The inexorable rise of prices in the major cities had put homes out of the reach of many first-time buyers and had become a political hot potato.

Yet the boom has also been a boon for household wealth with the government statistician estimating the housing stock was worth a cool A\$6.8 trillion (\$5.3 trillion) at the end of the third quarter - four times the size of annual gross domestic product.

The explosion in wealth had helped offset weakness in wages, so any lasting downturn in home prices could now act as a drag on consumer confidence and spending.

**China** – Growth in China's manufacturing sector unexpectedly picked up to a four-month high in December as factories cranked up production to meet a surge in new orders, a private business survey showed on Tuesday.

The reading suggested surprising resilience in the world's second-largest economy at the end of the year, though it was somewhat at odds with a much larger official survey on Sunday that pointed to a slight loss of momentum.

The Caixin/Markit Manufacturing Purchasing Manager's Index (PMI) rose to 51.5 last month, from 50.8 in November, and far outpacing economists' expectations for a slight dip to 50.6.

The 50-mark divides expansion from contraction on a monthly basis.

Analysts have expected some softening in China's manufacturing activity as a punishing crackdown on air pollution, a cooling property market and higher borrowing costs all start to weigh on the world's second-largest economy.

That view appeared to be borne out by the official data at the weekend which suggested that production expanded in December at a slightly more modest pace.

But Caixin's findings showed output grew at the fastest pace in three months, bolstered by improving demand.

Total new orders at home and from abroad rose at the strongest pace since August, with the sub-index jumping to 53.0 in December from 51.8 the previous month.

The Caixin survey tends to focus on small and mid-sized firms which are believed to be more export-oriented.

While the official data pointed to a wobble in production, it also showed a pickup in overseas orders which should help support China's exporters in the next few months.

**Euro Zone** – Euro zone manufacturers ended 2017 by ramping up activity at the fastest pace in more than two decades, a survey showed on Tuesday, and rising demand suggests they will start the new year on a high.

The bloc's economy outpaced its peers last year, and the European Central Bank plans to scale back its stimulus programme from this month. IHS Markit's December final manufacturing Purchasing Managers' Index for the bloc was 60.6, matching an earlier preliminary reading and above November's 60.1. That was the highest since the survey began in June 1997.

An index measuring output, which feeds into a composite PMI due on Thursday and seen as a good guide to economic health, rose to 62.2 from November's 61.0 - its highest in over 17 years and has only been above that once in the survey's history.

"The euro zone manufacturing boom gained further momentum in December, rounding off the best year on record and setting the scene for a strong start to 2018," said Chris Williamson, chief business economist at IHS Markit.

"Forward-looking indicators bode well for the new year: new orders rose at a near-record pace, while purchasing growth hit a new peak as firms readied themselves for higher production. Meanwhile, job creation was maintained at November's record pace."

Despite factories raising prices again last month, albeit at a slightly weaker rate than in November, an index measuring new orders nudged up to 61.5 from 61.4, a level not seen since around the start of the century.

Inflation was 1.5 percent in November, below the ECB's 2 percent target ceiling, but the central bank announced in October it will halve its monthly asset purchases to 30 billion euros from January.

A majority of economists in a Reuters poll last year said they thought the ECB should shut the door on the programme in September, but they were split on whether it actually would.

**U.K.** – Growth in British manufacturing cooled last month from four-year highs struck in November, but the sector remained a bright spot in Britain's economy heading into 2018, a survey showed on Tuesday.

In contrast to accelerating growth in the euro zone, the IHS Markit/CIPS UK Manufacturing Purchasing Managers' Index (PMI) dropped to 56.3 from 58.2 in November.

That was at the bottom end of forecasts in a Reuters poll of economists that had pointed to a reading of 58.0.

While growth in new business, output, export orders and employment slowed in December, the PMI stayed above its average for 2017 as a whole.

Alan Clarke, a fixed income strategist with Scotiabank, said the disappointing figures for the month probably represented only a temporary setback for the sector which accounts for 10 percent of the country's overall economic output.

"I would only start to worry if we see further declines of this magnitude in the coming months," Clarke said.

Sterling and British government bond prices were unchanged by the survey.

Overall, it added to signs that British manufacturers will prosper next year, when a slowdown in the overall economy is likely to deepen as Britain approaches its departure from the European Union in March 2019. British factories have been boosted by a resurgent European economy above all else.

Last month, euro zone manufacturers enjoyed their strongest growth since PMI records began more than 20 years ago, easily outpacing their British peers.

Samuel Tombs, an economist with consultancy Pantheon Macroeconomics, said the gap between British and euro zone manufacturers in December was the widest since June 2008.

"We expect the recovery in the manufacturing sector to lose its current vitality soon," he said, citing growing backlogs of work caused by recruitment problems and cuts to investment since the Brexit vote.

Cost pressures faced by British factories cooled to a four-month low -- good news for Bank of England policymakers who think consumer price inflation is already around its peak.

But the PMI also showed manufacturers added staff at the slowest pace in six months, adding to signs that job creation, a highlight of Britain's economy in recent years, is now slowing.

PMIs for the construction industry and the much larger services sector are due on Wednesday and Thursday.

**Canada** - The pace of growth in the Canadian manufacturing sector picked up at the end of last year as companies boosted their operating capacity amid an increase in backlogs of work and new orders, data showed on Tuesday.

The Markit Canada Manufacturing Purchasing Managers' index (PMI), a measure of manufacturing business conditions, rose to a seasonally adjusted 54.7 in December from 54.4 the previous month. A reading above 50 shows growth in the sector.

The measure of output rose to 54.1 from 53.7, while new orders increased to 54.6 from 53.9. Companies said the increased demand was partly due to spending in the energy sector, which is recovering from the oil price crash more than two years ago.

New orders for exports also saw modest growth, rising to 50.6 from 49.4, with manufacturers pointing to improving global economic conditions.

## ASIAN STOCK INDICATORS – Daily Outlook

**Japan's Nikkei** was closed for a holiday

**South Korean** KOSPI stock index rose on Tuesday. The Korean won climbed to the highest closing level in more than three years against the dollar while bond yields fell.

At 06:32 GMT, the KOSPI was up 12.16 points or 0.49 percent at 2,479.65. The benchmark index rose on strong foreign purchases.

The won was quoted at 1,061.2 per dollar on the onshore settlement platform, 0.88 percent firmer than its previous close at 1,070.5. The currency was boosted by expectations for improved relations on the Korean peninsula after Pyongyang said on Monday it was open to dialogue with the South. Additionally, South Korea's finance minister said on Tuesday the government will take action to stabilise the foreign exchange market if needed.

In offshore trading, the won was quoted at 1,060.67 per U.S. dollar, up 0.41 percent from the previous day, while in one-year non-deliverable forwards it traded at 1,054.6 per dollar.

MSCI's broadest index of Asia-Pacific shares outside Japan was up 1.03 percent.

The current price-to-earnings ratio is 12.10, the dividend yield is 1.28 percent and the market capitalisation is 1,242.04 trillion won.

The trading volume during the session on the KOSPI index was 230,256,000 shares, and of the total traded issues of 879, the number of advancing shares was 498.

Foreigners were net buyers of 130,260 million won worth of shares.

The U.S dollar has fallen 0.87 percent against the won this year.

In money and debt markets, March futures on three-year treasury bonds rose 0.05 points to 107.94.

The Korean 3-month Certificate of Deposit benchmark rate was unmoved from its previous close of 1.66 percent, while the benchmark 3-year Korean treasury bond yielded 2.122 percent, lower than the previous day's 2.13 percent.

**Hong Kong** stocks rose the most in three months to a decade-high on Tuesday, led by mainland companies listed in the city, after Beijing kicked off H-share convertibility reform.

The market was also aided by China's stronger-than-expected factory activity, as well as strong property sales performance during the last week of 2017.

At close of trade, the Hang Seng index was up 596.16 points or 1.99 percent at 30,515.31. The Hang Seng China Enterprises index rose 3.07 percent to 12,068.99.

The sub-index of the Hang Seng tracking energy shares rose 2.9 percent while the IT sector rose 2.65 percent, the financial sector was 2.42 percent higher and the property sector rose 2.16 percent.

The top gainer on the Hang Seng was Sunny Optical Technology Group Co Ltd up 9.61 percent, while the biggest loser was Galaxy Entertainment Group Ltd which was down 3.83 percent.

China's main Shanghai Composite index closed up 1.27 percent at 3,349.052 points while its blue-chip CSI300 index ended up 1.41 percent.

Around the region, MSCI's Asia ex-Japan stock index was firmer by 0.99 percent.

The yuan was quoted at 6.4992 per U.S. dollar at 08:11 GMT, 0.12 percent firmer than the previous close of 6.5069.

The top gainers among H-shares were China Vanke Co Ltd up 9.94 percent, followed by Great Wall Motor Co Ltd gaining 7.49 percent and Anhui Conch Cement Co Ltd up by 5.99 percent.

The three biggest H-shares percentage decliners were Air China Ltd which was down 1.69 percent, Zhuzhou CRRC Times Electric Co Ltd which fell 0.1 percent and CGN Power Co Ltd down by 0.9 percent.

About 2.44 billion Hang Seng index shares were traded, roughly 143.6 percent of the market's 30-day moving average of 1.70 billion shares a day.

At close, China's A-shares were trading at a premium of 28.83 percent over the Hong Kong-listed H-shares.

The price-to-earnings ratio of the Hang Seng index was 13.64 as of the last full trading day while the dividend yield was 2.9 percent.

The short and one-factor leveraged Hang Seng index, which is designed to replicate the payoff of a short or leveraged portfolio and is linked to the movements of the Hang Seng Index, was lower by 1.97 percent on the day at 4,836.67 points.

**China stocks** started 2018 on a bullish note following a survey showing better-than-expected manufacturing activity in December.

A private business survey showed growth in China's manufacturing sector unexpectedly rose to a four-month high in December thanks to a surge in new orders.

The Shanghai Composite index closed up 41.88 points or 1.27 percent at 3,349.05.

The blue-chip CSI300 index was up 1.41 percent, with its financial sector sub-index higher by 2.05 percent, the consumer staples sector up 0.51 percent, the real estate index up 3.79 percent and healthcare sub-index up 0.03 percent.

The smaller Shenzhen index ended 1.05 percent up and the start-up board ChiNext Composite index was higher by 0.97 percent.

Around the region, MSCI's Asia ex-Japan stock index was 1.08 percent firmer while Japan's Nikkei index closed down 0.08 percent.

At 07:01 GMT, the yuan was quoted at 6.4953 per U.S. dollar, 0.18 percent firmer than the previous close of 6.5069.

The largest percentage gainers in the main Shanghai Composite index were Fujian Cement Inc up 10.04 percent, followed by Shandong Lubei Chemical Co Ltd gaining 10.03 percent and China Jushi Co Ltd up by 10.01 percent.

The largest percentage losers were BOCO Inter-Telecom Co Ltd down 5.03 percent, followed by Jiangsu Protruly Vision Technology Group Co Ltd down 4.96 percent and HUAYU Automotive Systems Co Ltd down by 4.65 percent.

About 20.23 billion shares were traded on the Shanghai exchange, roughly 133.4 percent of the market's 30-day moving average of 15.16 billion shares a day. The volume in the previous trading session was 0.00.

As of 07:02 GMT, China's A-shares were trading at a premium of 29.17 percent over the Hong Kong-listed H-shares.

The Shanghai stock index is below its 50-day moving average and above its 200-day moving average.

The price-to-earnings ratio of the Shanghai index was 14.87 as of the last full trading day while the dividend yield was 1.9 percent.

So far this week, the market capitalisation of the Shanghai stock index has risen by 0.07 percent to 28.92 trillion yuan.

## CURRENCIES – Daily Outlook

### Dollar slides to more than 3-month low on first trading day of 2018 - Reuters News

The dollar dropped on Tuesday to its lowest in more than three months, weighed down on the first trading day of 2018 by expectations of a slower pace of interest rate increases by the Federal Reserve amid a tepid U.S. inflation picture.

The dollar's decline extended its underperformance in 2017, which saw the greenback post its weakest annual performance in 14 years.

"Investors remain skeptical about the Fed's outlook for three additional interest rate increases this year,

especially given the extremely benign inflation backdrop in the U.S.," said Omer Esiner, chief market analyst, at Commonwealth Foreign Exchange in Washington.

The dollar's upside was also capped, as major central banks such as the Bank of England and European Central Bank are moving toward normalizing their own monetary policies.

The dollar index hit a 3-1/2-month trough of 91.751 and was last down 0.3 percent at 91.887. For 2017, the dollar index slid more than 9.8 percent, its weakest since 2003.

"Any further drop below 91.00 would confirm a continuation of the dollar's bearish trend from the beginning of 2017, with the next major downside target around the 90.00 psychological support level," said James Chen, head of research at Forex.com in Bedminster, New Jersey.

The euro, meanwhile, has been on a tear especially since the second half of last year on optimism over a brightening euro zone economic picture.

In 2017, the euro had its strongest yearly showing against the dollar since 2003 as European economies strengthened and expectations grew the ECB will wind down monetary stimulus.

The euro rose to start the new year, climbing to a nearly four-month high of \$1.2082. It was last up 0.3 percent at \$1.2049.

Euro zone manufacturers ended 2017 by ramping up activity at the fastest pace in more than two decades, a survey showed on Tuesday, and rising demand suggests they will start the new year on a high. Also boosting the euro was a comment from an ECB official over the weekend. The ECB's Benoit Coeure said he saw a "reasonable chance" the bank's bond purchases would not be extended beyond September.

Against the yen, the dollar fell 0.4 percent to 112.32. The yen continues to benefit from last week's release of the Bank of Japan's minutes of its meeting.

The minutes showed some members are considering tightening monetary policy if the economy continues to improve next year, which would be a significant shift in strategy for a central bank thought to be the last to exit easier monetary policies. [\(Source Reuters, Research – @her1en\)](#)

## Precious Metal – Daily Outlook

### Gold prices extend rally as palladium touches record high - Reuters News

Gold extended its rally into the new year on Tuesday, touching late September highs on a softer U.S. dollar, while spot palladium jumped to a record on fears of short supplies after soaring 57 percent in 2017.

Spot gold was up 1 percent at \$1,315.11 per ounce at 2:36 p.m. EST (1936 GMT) after hitting \$1,315.46, the highest since Sept. 20, 2017. Gold has risen each trading session since Dec. 15.

U.S. gold futures for February delivery settled up \$6.80, or 0.52 percent, at

\$1,316.10 per ounce.

The dollar index fell to a more than three-month low on expectations of a slower pace of interest rate hikes by the U.S. Federal Reserve.

The greenback posted its biggest annual drop since 2003 in 2017, helping to lift gold to an annual increase of more than 13 percent. Bullion surged \$55 an ounce in the last three weeks of 2017 alone.

Global markets received a boost on Tuesday from gains in U.S. equities and surprisingly upbeat Chinese manufacturing data.

"(Gold's) rally has been part and parcel with the weaker dollar," said Rob Haworth, senior investment strategist at U.S. Bank Wealth Management in Seattle.

"The tax plan seems to have changed the tenor and trend of the market," he added, referring to the Republican tax overhaul expected to balloon the U.S. budget deficit.

Technical analysts warned that gold's rally is looking overdone.

Key factors for the bullion market this year will be how quickly central banks normalize interest rates, how much further the equities rally goes, the longer-term impact of U.S. tax reforms, and when inflation will pick up, Mitsubishi analyst Jonathan Butler said.

Gold is highly sensitive to rising U.S. interest rates because it increases the opportunity cost of holding non-yielding bullion, while boosting the dollar, in which it is priced.

Palladium jumped 3.12 percent to \$1,094.10 per ounce.

Prices rose to \$1,096.50, surpassing a previous record set in January 2001. Palladium was the stand-out performer among major precious metals last year, jumping 57 percent to hit a series of multiyear highs.

"Palladium continues to rally on real demand and supply tightness," Miguel Perez-Santalla, vice president of Heraeus Metal Management in New York, said in a market note.

Among other precious metals, spot silver was up 1.4 percent at \$17.184. Platinum was 1.70 percent higher at \$941.50 per ounce. [\(Source Reuters, Research – @her1en\)](#)

## OIL – Daily Outlook

### Oil hits highest since mid-2015 but settles down as outages abate - Reuters News

Oil prices hit mid-2015 highs in early trading on Tuesday but dipped to settle slightly lower as major pipelines in Libya and the UK restarted and U.S production soared to the highest level in more than four decades.

It was the first time since January 2014 that the two crude oil benchmarks opened a year above \$60 per barrel. Prices were buoyed by large anti-government rallies in Iran and supply cuts led by OPEC and Russia.

U.S. West Texas Intermediate (WTI) crude futures

settled 5 cents lower at \$60.37 a barrel. In early trading WTI hit \$60.74, the highest level since June 2015.

Brent crude futures, the international benchmark, settled 30 cents, or 0.5 percent lower at \$66.57 a barrel. The session high of \$67.29 was the highest since May 2015.

The spread between U.S. crude and Brent hit the narrowest in nearly two weeks.

The 450,000 barrel per day (bpd) capacity Forties pipeline system in the North Sea returned to full operations on Dec. 30 after an unplanned shutdown.

Repairs have been completed on a Libyan oil pipeline damaged in a suspected attack last week and production is restarting gradually, engineers said.

"The resolution of the North Sea pipeline issue is having the expected result that the Brent-WTI spread is narrowing today," David Thompson, executive vice-president at Powerhouse, an energy-specialized commodities broker in Washington.

Thompson added that traders have been returning to work from the holidays, boosting volumes.

"Despite the day's price weakness, both Brent and WTI remain in solid, long-term bullish trends - \$58.95 is nearby support on WTI front-month futures and \$65.60 is the corresponding support on front-month Brent futures."

Iran's Supreme Leader on Tuesday accused the country's enemies of stirring unrest, as the death toll rose to 21 from anti-government demonstrations that began last week.

Iran is OPEC's third-largest crude producer. Iranian oil industry and shipping sources said protests have had no impact so far on oil production or exports.

"Geopolitical risks are clearly back on the crude oil agenda after having been absent almost entirely since the oil market ran into a surplus in the second half of 2014," Bjarne Schieldrop, chief commodities analyst at SEB, said, also citing Kurdistan and Libya.

Oil prices have been supported by production cuts led by the Organization of the Petroleum Exporting Countries and Russia. The cuts are scheduled to cover all of 2018.

U.S. commercial crude oil inventories have fallen by almost 20 percent from their historic highs last March, to 431.9 million barrels.

Strong demand growth, especially from China, has also been supporting crude.

However, rising U.S. production, which is on the verge of breaking through 10 million bpd, has tempered the bullish outlook.

"We think U.S. tight oil production growth warrants close monitoring as it could spoil OPEC's market-balancing efforts, pushing the market into surplus in 2018," Barclays bank said.

October U.S crude production rose 167,000 barrels per day to 9.64 million bpd, according to the EIA's monthly production report. If the figure is not revised next month, it would be the highest monthly level since May 1971.
